Continuation of 2. NOTE: Newly added limitations, such as "an innermost side of the exterision is adjacent to an outside surface of the recess" in claims 1 & 4, would require further search and/or consideration.

Continuation of 5. does NOT place the application in condition for allowance because:

Regarding claim 7, applicant argues that Kim does not disclose a gate electrode completely overlying the gate dielectric layer because a dielectric layer 62 and 52 represent the same layer. This is not convincing. As shown in Fig.4L, a gate electrode is only formed on the oxide film 62 but not on the oxide film 52. Thus the oxide film 52 is not a gate dielectric layer. Kim clearly teaches the oxide film 62 is a gate oxide film (Col.6, line 33-34). Therefore, a gate electrode completely overlying the gate dielectric layer.

Applicant argues that Kim does not disclose the source/drain terminal comprise an extension. Fig.4L clearly shows the source/drain terminal 65 comprises an extension 60.
